

# OGWC NATURAL & WORKING LANDS STAKEHOLDER ADVISORY COMMITTEE AGENDA

**Meeting Date:** January 12, 2023, 12:30pm – 2:00pm

**Meeting Type:** Virtual using GoToMeeting

**Link to Join Meeting:** <https://meet.goto.com/273913773>

You may also dial in using your phone: Access code: 273-913-773; 1(872) 240-3412

## **In advance of meeting, please review:**

- Definitions proposed by Advisory Committee members and Natural and Working Lands Inventory (from State of California and modified by Oregon technical experts)
- Background and Objectives for GHG Inventory for Natural and Working Lands in Oregon
- Draft list of practices to increase sequestration and reduce greenhouse gas emissions from Oregon's five land sectors

**5 minutes**      **Welcome and Introductions**

**25 minutes**      **Definitions**

Advisory Committee members will share perspectives about definitions proposed by committee members as well as the Natural and Working Lands Inventory definitions from California with proposed modifications from Oregon technical experts.

**10 minutes**      **Background and Objectives for GHG Inventory for Natural and Working Lands in Oregon**

Advisory Committee members will review the Background and Objectives for GHG Inventory for Natural and Working Lands in Oregon and provide any comments/perspectives.

**45 minutes**      **Draft List of Practices to Increase Sequestration and Reduce GHG Emissions from Oregon's Five Land Sectors**

Advisory Committee members will share perspectives on the draft list of practices to increase sequestration in each of the five land sectors. **Note:** The focus of these practices is to increase sequestration and/or reduce climate gas releases from working land sectors; many practices land management agencies promote for landowners can have important overall benefits, but if they are not demonstrated to increase sequestration and/or reduce climate gas release, they are not included in the list of proposed practices.

The following questions will be discussed:

1. Are there any practices in this document that you disagree with promoting, and if so, what are they and why do you not concur they be included?
2. Are there any additional practices you recommend including in any of the five land sector categories IF they meet the criteria for inclusion in the document (e.g., is not a practice that the experts state will not be included because they do not fall within the context of GHG and carbon stock accounting for purposes of the NWL initial efforts)?
3. What additional perspectives would you like to share regarding this document - that you believe would add value and context to process being used to identify practices, and then take the next step to develop activity metrics for those practices?

**5 minutes**

**Wrap-up and Key Next Steps**
