

Nicole Maness (she/her) Willamette Partnership to Everyone 01:29 PM It would be helpful if the individual's position within an organization is added to the list. Thank you

Mimi Casteel to Everyone 01:30 PM I second nicole's request

Jan Lee/OACD to Everyone 01:32 PM I can't see all of the list, but I don't see anyone from Oregon's Natural Resources Conservation Service in the ag group and they are the largest funder and technical body for ag in the state. There seems to be a fair number of academics but not people like employees of NRCS who work on the ground with farmers & ranchers. Sorry my audio is not working well on this forum. Jan

Craig Cornu to Everyone 01:45 PM Follow up to comment about seagrass conservation is that it's tricky for a habitat which can vary widely year to year in its density and distribution on estuarine tidal flats. But as noted by Liz Ruther in her suggestion, there are other states that have established seagrass conservation programs which we could look to as models for Oregon's approach.

Katie Voelke (She/Her) NCLC to Everyone 01:48 PM I appreciate this point very much

Lisa Gaines, INR to Everyone 01:48 PM Jan, we (Cathy Macdonald and I) are in contact with Ron Alvarado, and will seek additional reviewers.

Laura Tabor, TNC to Everyone 01:49 PM I agree with Nicole's point about clear criteria.

Lisa Gaines, INR to Everyone 01:49 PM Nicole and Mimi, we can add the positions to the spreadsheet that Lisa D shared.

Nicole Maness (she/her) Willamette Partnership to Everyone 01:51 PM Thank you Lisa

Katie Voelke (She/Her) NCLC to Everyone 02:02 PM Fire regime is a good one for the scientists - if fire helps naturally thin, thus the forest around has trees that can grow bigger faster rather than being stunted, then the fire regime likely does support climate mitigation through more storage in larger trees.

Greg Holmes (he/him) to Everyone 02:04 PM Reducing fire risk can also be about what development we allow in wildland/urban interface, and other land use practices.

Nicole Maness (she/her) Willamette Partnership to Everyone 02:04 PM It seems as though the Document Scope section of the draft could use some additional detail that more clearly defines what is included and why, and what was not included and why.

Jocelyn Bridson to Everyone 02:18 PM The scope should be focused on actions that could be taken on working lands.

Catherine Macdonald to Everyone 02:22 PM USFS is going to release a definition of carbon stewardship soon.

Amanda Sullivan-Astor, AOL to Everyone 02:26 PM Determining how to measure them against the inventory along with the activity metric or monitoring use of the tools?
